Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: the amendment filed 2/9/2004 has overcome the prior art of record. The prior art of record fails to teach or fairly suggest other switching circuitry configurable to selectively operatively connect at least a second one of the load resistance transistors in parallel with the at least one other of the load resistance transistors as called for in claim 1, the switching circuit is configured to selectively apply either a disabling control signal or a variable control signal to the at least one of the load resistance transistors as called for in claim 7, the switching circuitry is configured to selectively apply either a deactivating control signal or a variable activating control signal to the at least one of the bias current transistors as called for in claim 9, switching circuitry configured to selectively apply either a substantially fixed deactivating control signal or a variable activating control signal to at least one of the load resistance transistors, and further switching circuitry configured to selectively apply either a substantially fixed disabling control signal or a variable enabling control signal to at least one of the bias current transistors as called for in claim 11, wherein at least one of the conditions from the group consisting of the following is true: 1) the plurality of the first load resistance transistors and the plurality of the second load resistance transistors each includes at least three load resistance transistors; 2) the plurality of bias current transistors includes at least three bias current transistors as called for in claim 17. Therefore, claims 1, 3-12 and 14-27 are presently allowed.
